Exam Reviewer · Computer

Grades 6–9 · Scams · Computer parts · Computer problem solving · Computer etiquette

1. Scams

What is a scam?

- A trick to steal your money, your account or your personal information.
- It can come as a text, email, pop-up, phone call, game chat, ad or website.

Warning signs

- **Rushing you:** "Only 10 minutes!", "Your account will close today!"
- **Prizes you never entered**, free coins, skins or phones, and "pay a small fee to claim".
- **Secrets and gift cards:** "Buy gift cards, don't tell anyone."
- **Asking for private information:** passwords, the code sent to your phone, address, card numbers.
- **Fake senders and links:** addresses or links that only look like the real school, bank or game. A logo or HTTPS lock does not prove a site is real.

What to do

- Never share passwords or one-time codes, not even with "support". Real companies never ask for them.
- Don't click links in suspicious messages. Open the real app or a saved bookmark yourself.
- Check with the person another way (call, talk in person). Hacked accounts can message you as a "friend".
- Keep private information private; deny app permissions an app does not need.
- Never meet an online friend without a trusted adult knowing. Tell a trusted adult when something feels wrong.

2. Computer parts

Main parts

Part	What it does
CPU (processor)	The "brain": does the calculations and runs programs.
RAM (memory)	Short-term memory for what is open now. Emptied when the power goes off. More RAM = more programs open smoothly.
Storage (SSD / HDD)	Keeps files and programs even when the power is off.
Motherboard	The main board that connects all the parts.
Power supply (PSU)	Turns electricity from the wall into power for the parts.
Graphics card (GPU)	Makes the pictures for the screen, games and videos.
Heat sink and fan	Keep the CPU cool.
USB flash drive	Small, portable storage that plugs into a USB port.

Input devices (send information IN)	Output devices (send information OUT)
Keyboard, mouse, microphone, scanner, webcam	Monitor, printer, speakers, headphones

3. Computer problem solving

Think like a technician

- **Look first:** lights, cables, switches, error messages.
- **Check the simple things first:** power, plugs, the right input/output, volume.
- **Fix only what is broken.** Close one frozen app instead of switching off the whole computer.
- **Stay safe:** power off and unplug before touching anything inside. If unsure, ask the teacher.

Common problems

Problem	Check first
Monitor says NO SIGNAL	The video cable (HDMI) at both ends and the monitor input.
No sound	The right sound output (speakers) and the volume.
Nothing turns on	The power strip switch, the plug and the power cable.
No internet	Wi-Fi turned on and the right network chosen, or the Ethernet cable plugged in.
Keyboard or mouse not working	The USB plug: push it in or try another port.
One app frozen	Close only that app and reopen it.
Computer slow	Close programs you are not using, then restart.

Viruses and malware

- Malware = harmful software (viruses, spyware, ransomware). It hides in cracked games, strange downloads, unknown USB sticks and fake pop-ups.
- Signs: suddenly slow, new toolbars, ads opening by themselves.
- Protection: install updates, use antivirus, download only from official stores, never plug in unknown USB sticks.
- Scary pop-ups that say "Call this number" or "Pay to fix it" are scams: close the browser and tell an adult.

4. Computer etiquette

Online

- Treat people online the way you want to be treated. ALL CAPITALS reads like SHOUTING.
- If someone is bullied: support them, save proof (screenshots) and tell a trusted adult.
- Ask permission before posting photos of other people. Keep friends' private messages private.
- Think before you post: posts can be screenshotted and kept forever. Wait until you are calm.
- Give credit for other people's work. If you share something false, correct it.

In the computer lab

- No food or drinks near computers.
- Use headphones at a low volume.
- Log out before you leave; don't open or change other people's files.
- Report broken equipment to the teacher instead of fixing it yourself.
- Print only the pages you need.
